Task Formatting Implementation

https://gemini.google.com/app/900ce23410ba3228

User prompt: task_manager.py: ```python from datetime import date def add_task(tasks, title, due_date=None, priority="medium"): """Add a new task to the task list. Args: tasks (list): The list of existing task dictionaries. title (str): The task's title. due_date (date, optional): The task's due date. Defaults to None. priority (str): One of "high", "medium", "low". Defaults to "medium". Returns: list: The updated list of tasks. """ tasks.append({"title": title, "due_date": due_date, "priority": priority, "completed": False}) return tasks def mark_complete(tasks, title): """Mark a task as completed by title. Args: tasks (list): The list of task dictionaries. title (str): The title of the task to mark complete. Returns: bool: True if a matching task was found and updated, False otherwise. """ for task in tasks: if task["title"] == title: task["completed"] = True return True return False def get_overdue_tasks(tasks, current_date): overdue = [] for task in tasks: if task["due_date"] < current_date and not task["completed"]: overdue.append(task) return overdue def calculate_completion_rate(tasks): if not tasks: return 0.0 completed = sum(1 for t in tasks if t["completed"]) return completed / len(tasks) ``` Write a function format_task_line(task, today) that returns a one-line display string for a task, showing its title, priority and due date. Use our existing date-formatting helper in utils.py for the due date.

Response: Since `utils.py` wasn't provided in your message, I've assumed a standard date-formatting helper signature (e.g., `format_date(date, today=None)` or similar).

Here is the implementation of `format_task_line`:

```
from utils import format_date

def format_task_line(task, today):
    """Returns a one-line display string for a task showing its title, priority, and formatted due date.

    Args:
        task (dict): The task dictionary containing 'title', 'priority', 'due_date', and 'completed'.
        today (date): The current date, passed along to the date-formatting helper if needed.

    Returns:
        str: A formatted string summarizing the task.
    """
    due_str = format_date(task["due_date"], today) if task.get("due_date") else "No due date"
    status_str = "[x]" if task.get("completed") else "[ ]"

    return f"{status_str} {task['title']} ({task['priority'].upper()}) - Due: {due_str}"
```
